Vice Provost for Academic Affairs:

I strongly support the establishment of an Interdisciplinary Health Sciences PhD program. The program will provide an avenue for masters students in the Dept. of Health Physics and Diagnostic Sciences to further their education and, as such, it will enhance the research mission of the Dept. Presently, students wishing to pursue a PhD in Health Physics have relatively few options, especially in the Intermountain West where there are currently only two such programs (Idaho State and Oregon State). The proposed program therefore addresses an unmet need and is likely to attract highly qualified health physics students to UNLV.

Sincerely,

Steen Madsen, Ph.D.
